Education

Indian Institute of Information Technology, Gwalior

Jul 2020 – May 2025

Integrated Bachelors and Masters in Information Technology

CGPA:7.9

Experience

Fermi AI (Meraki Labs venture)

May 2026 – Present

Software Engineer

Bangalore, India; Onsite

- Built **usage-based billing** and a credit ledger for AI tutors using **FastAPI**, **Postgres** and **Celery**.
- Launched **Scan & Ask**, a photo-to-AI-tutor pipeline (Gemini), live with India's **National Digital Library**.
- Reduced Postgres connection setups **92%** (64 → 5); set up **Grafana monitoring** via **Terraform** on **AWS ECS**.
- Optimized home-page payload **3,900x** (3.9MB → 1KB) and library queries **4.5x** (9 → 2 scans).

Nurix AI (Meraki Labs venture)

Oct 2025 – Apr 2026

Software Engineer

Bangalore, India; Onsite

- Designed and developed a **Campaign Manager system** for bulk lead ingestion and automated outbound calling with configurable logic using **FastAPI**, **AWS SQS**, and **MySQL**.
- Performed load testing and system optimization reducing **database load by 70%**, implemented **Weighted Fair Scheduling** and improved session handling to enhance system scalability.
- Built a **queue orchestrator** with Redis-backed agent-level **rate limiting** using Lua scripts for triggering outbound calls.

Nurix AI (Meraki Labs venture)

Mar 2025 – Sep 2025

Software Engineer Intern

Bangalore, India; Onsite

- Integrated **LiteLLM** as a unified LLM interface to orchestrate LLM and tool calls across multiple providers.
- Built end-to-end frontend using **Next.js** for an **AI Agent QA Platform**, enabling testing and debugging of AI agents.
- Engineered a **channel integration** that enables embedding customizable chat agents into any website, leveraging **Service Workers** for WebSocket management and multi-tab synchronization.

Projects

GroupMailBox – Lead-capture & Email SaaS | TypeScript, Express, BullMQ, Redis

Apr 2026 – Present

- Published a **Chrome extension** on the **Chrome Web Store** that syncs Facebook Group leads to Google Sheets.
- Built a **Gmail campaign engine** on **BullMQ** + **Redis** with rate limits, retries and signed unsubscribe links.
- Shipped **Google OAuth**, **JWT auth**, paid plans, and the **groupmailbox.com** site solo.

Relay – Durable Workflow Engine | Python, FastAPI, Postgres, OpenTelemetry

In progress

- Designing a **Postgres-backed durable execution engine**: journal + replay, so workflows resume after any crash.
- Effectively-once side effects** via idempotency keys; chaos test target: 1,000 workflows → 1,000 charges.
- Stateless workers lease tasks via Postgres **SKIP LOCKED**, with durable timers, signals and **OpenTelemetry** tracing.

Technical Skills

Languages: Python, TypeScript, JavaScript, C++, SQL

Frameworks and Libraries: FastAPI, Node.js, Express.js, React, Next.js, Celery, BullMQ, LangGraph

Databases: PostgreSQL, MySQL, Redis, MongoDB, DynamoDB, ClickHouse

Cloud and DevOps: AWS, Docker, Terraform, Grafana

Coding Profile

- Codeforces:** Highest Rating: **1562 (Specialist)** (codeforces.com/profile/zyab)
- CodeChef:** Highest Rating: **1884 (4 Star)** (handle: zyab_officials)
- LeetCode:** Highest Rating: **1860 (Knight)** (leetcode.com/u/Smohite3)

Achievements

- Achieved a global rank of **38** in **Codeforces Round 760** Division 3.
- Attained rank of **432** in **Codeforces Round 764** Division 3.
- Qualified among the **top 1600** out of **400k+** teams in **Flipkart Grid 5.0** competition.
- Achieved a ranking in the **top 20** among **2000+** students on the **GeeksforGeeks** platform within the college.
- Secured **3rd place** in **IIIT Gwalior's WebKriti**, an intra-college hackathon.
