Summary

Full-stack software engineer with **2+ years** of experience, mostly on the **backend**, building voice and chat AI products used by enterprise clients. Also worked as a **forward deployed engineer**, working directly with clients. I like owning things end to end and enjoy learning and solving the problems that come while **scaling systems**.

Education

Indian Institute of Information Technology and Management Gwalior — **Jul 2020 – May 2025**
Integrated B.Tech and M.Tech in Information Technology — *CGPA: 7.9*

Experience

Meraki Labs – Venture Studio — **Mar 2025 – Present**
Software Engineer – shipping AI-native products across ventures — *Bangalore, India*

Nurix AI *– Voice AI Agents | Python, FastAPI, TypeScript, MySQL, Redis, Lua, SQS, LiteLLM*

- Designed a **Campaign Manager** for outbound calling: **5 lakh+ calls/day**, **500 concurrent**, ∼40 clients.
- Shipped a **telephony re-architecture** on **LiveKit**: SIP trunks, Redis number-to-agent routing, **MCube** provider.
- **Forward-deployed engineer** on **conversational agents** for US/India clients (First Mid, edtech), **$200K+ ARR**.
- Cut **database load 70%** by making blocking calls asynchronous; added **Weighted Fair Scheduling**.
- Engineered a queue orchestrator with per-agent **rate limiting** to trigger outbound calls reliably.
- Integrated a **unified LLM interface** orchestrating model and tool calls across multiple providers.
- Delivered an embeddable **chat-agent channel** for any website with multi-tab **WebSocket** sync.

Fermi AI *– AI Tutoring | Python, FastAPI, PostgreSQL, Celery, Redis, AWS, Terraform, Gemini*

- Shipped **usage metering & billing** on three surfaces, charged per active minute, **no double-charges**.
- Built a **targeting & A/B platform**: FastAPI + Redis API, Celery workers, Python SDK, **MCP** and **OAuth 2.1**.
- Launched **Scan & Ask**, a photo-to-AI-tutor pipeline live on India's **National Digital Library**, **98%** parse accuracy.
- Cut Postgres connection setups **92%** (64 to 5) when possible connections (**1,050**) exceeded the RDS limit (**450**).
- Ran services on **AWS ECS** via **Terraform** with **Grafana** dashboards, CloudWatch alerts and a daily SLO report.

Projects

GroupMailBox – Lead-capture & Email SaaS | *TypeScript, Chrome MV3, Express, BullMQ*

- Published a **Chrome extension** (v1.0.3) that captures, dedupes and syncs Facebook Group leads to **Google Sheets**.
- Created a **Gmail campaign engine**: **100 emails/min**, 3 retries, **450/day** user cap, signed one-click unsubscribe.
- Added bulk **member-request review** for group admins, verifying each approval and capped at **50 per session**.

Relay – Durable Workflow Engine | *Python, FastAPI, Postgres, OpenTelemetry*

- Built a **Postgres-backed durable execution engine** with journal and replay; **1M** in-flight runs survive any crash.
- Chaos-tested **effectively-once side effects**: killed workers mid-run across **1,000** workflows, exactly **1,000** charges.
- Designed for **1M workflows/day** on a single Postgres (**5k txn/s** at peak) using **SKIP LOCKED** task queues.
